De normalen voor de gemiddelde maand- en jaartemperatuur worden elke 10 jaar vastgesteld door het KNMI. Dat betekent dat de normen (met enige vertraging) meeveranderen met het klimaat: wat vroeger te warm was is nu normaal. Wanneer er over een langere periode gekeken wordt, wordt meestal uitgegaan van normalen over de periode 1961 - 1990.

Afwijking ten opzichte van de periode 1961-1990

ex-treem koud

zeer koud

vrij koud

normaal

vrij warm

zeer warm

ex-treem warm

re-cord warm

In de maanden mei - september spreekt men van 'te koel' of 'te warm' weer; in de maanden oktober - april spreekt men van 'te koud' of 'te zacht' weer.
